Bloemfontein Athletic Stadium with new CONICA track

January 28, 2013

First time in history that an IAAF Class 1 certificate has been awarded to a South African athletics facility

The Mangaung Athletics Stadium in Bloemfontein has been undergoing major renovations during the last two years.

The renovations in South Africa's sixth biggest city, which was the venue for six matches during 2010 FIFA World Cup, were aimed at bringing the stadium up to world-class standards, staging national and international athletics events in future.

In the course of construction works a new track system has been installed. People in charge decided in favour of the track system CONIPUR MX of CONICA Sports Surfaces. The high performance full PUR system guarantees high energy recovery whilst supporting athletes in their natural sequences of motion.

The facility has been awarded Class 1 certificate by the IAAF, which is the first facility in South Africa which was given that honour so far.

The installation of the track system was implemented of CK Industries, based in Benoni, South Africa, a company well experienced in construction of track systems.
